

COURSE DESCRIPTION

QUANTITATIVE METHODS OF SOCIAL SCIENCES – STATISTICS

- Level: Bachelor, 4th Year.
 - Topics Covered: Introduction to statistical analysis, data interpretation, descriptive statistics and data summarization, probability theory and distributions, hypothesis testing and statistical inference, data analysis using SPSS, interpretation of behavioral and social data, identification of patterns in data, introduction to quantitative analysis of human behavior.
 - Course Type: Theoretical & Practical.
 - Key Literature: 1. Agresti, A. (2021). Statistical Methods for the Social Sciences
2. Field, A. – Discovering Statistics Using IBM SPSS
-

QUANTITATIVE METHODS OF SOCIAL SCIENCES – MATHEMATICS

- Level: Bachelor, 3rd Year.
 - Topics Covered: Mathematical modeling of complex systems and processes, limits and derivatives for analyzing dynamic change, optimization techniques (maximization/minimization) in decision-making and problem-solving, comparative statics for analyzing variable interactions, multivariable functions and partial derivatives, modeling relationships between multiple variables in behavioral systems, applications of mathematical methods in understanding decision-making and cognitive processes.
 - Course Type: Theoretical & Practical.
 - Key Literature: 1. Chiang, A. C. (2009). Mathematical Methods of Economic Analysis
2. Jacques, I. (1995). Mathematics for Economics and Business
-

INFORMATICS, TECHNOLOGY AND SOCIETY

- Level: Bachelor, 3rd Year.
- Topics Covered: Information systems and digital technologies, data collection, processing, and analysis, use of digital tools (e.g. MS Office, Google tools), information management and data-driven decision-making, digital communication and human-computer interaction, social and economic impact of information technology, development of digital and multimedia content.
- Course Type: Theoretical & Practical.
- Key Literature: 1. O’Leary, T. (2021). Computing Essentials
2. Evans, A., Martin, K., & Poatsy, M. (2014). Technology in Action

ANTHROPOLOGICAL THOUGHT AND SOCIAL THEORY

- Level: Bachelor, 1st Year
- Topics Covered: Classical and contemporary theories of society and human behavior, anthropological approaches to culture, identity, and social interaction, analysis of social structures and institutional systems, interpretation of human behavior and social cognition, qualitative approaches to studying behavior and meaning-making, development of critical thinking and analytical reasoning
- Course Type: Theoretical.
- Key Literature: 1. Eriksen, P., & Murphy, L. (2023). A History of Anthropological Theory
